IO Return Board

STG-IORET-33

BENEFITS & FEATURES:

- Allows for convenient location of return, common, or ground wiring in a panel.

Power Distribution Boards:

The IO Return Board provides a convenient location for return wiring. A bus of 33 internally connected terminals eliminate the need for individual return connections at the controller. It is especially useful where limited controller returns are available, such as Schneider Electric's EcoStruxure AS-B-36.

SPECIFICATIONS:

Operating Temperature:	+32 to +122 Degrees F
